The Honorable Tammy Duckworth
U.S. Senate
524 Hart Senate Office Building
Washington, DC 20510

The Honorable Mazie Hirono
U.S. Senate
713 Hart Senate Office Building
Washington, DC 20510

Dear Representatives Meng and Senators Harris, Duckworth and Hirono:

As professional scientific organizations, we know the power of collective action to solve problems -- it is how research has advanced for centuries. Today, we stand united in a spirit of diversity and inclusion and offer our support for people of Asian ancestry, rejecting efforts to ascribe fault for the pandemic, and instead urge a focus on leveraging global human diversity to solve today's public health crisis. The organizations below applaud and support your Congressional resolutions to denounce anti-Asian discrimination as related to COVID-19.

Our societies have been concerned by news reports that individuals of Asian ancestry are increasingly subject to stigma, physical attack, or suspicion due to the potential origins of the novel coronavirus SARS-CoV-2. These actions are wrong and unacceptable for their racial overtones, their impact on societies and individuals, and run counter to the core values of the scientific community and the members we represent. As scientists, we know viruses respect no borders, and originate and evolve worldwide.

We encourage global leaders and the public to recognize and tap global diversity as one of our greatest assets to solve the global pandemic, including the vital role of U.S. researchers of Asian ancestry and those worldwide. Researchers are joining with clinicians and citizens of all nationalities and ancestries to coordinate a response. We are working across specialties and sectors to understand the novel coronavirus pathogen, develop new treatments, provide medical care, protect citizens and economies, and care for loved ones.

Finally, just as pandemics are global, investment in science must be as well. Solutions for COVID-19 will emerge from the scientific knowledge made possible through decades of research underway worldwide. Sustained and growing research investment is essential for solving today's public health crisis and will be vital to preventing and managing future ones.

Together, we will urge our members to use their prominent voices to support this resolution; denounce these trends; support more research worldwide, including directed to the issues emphasized in your resolution; and stress the importance of diversity, equity and inclusion. We thank you and stand with you. If we can provide additional data, support or information to you regarding the resolution, please contact Joanne Carney, Chief Government Relations Officer at the American Association for the Advancement of Science, at govrelations@aaas.org.

Sincerely,
